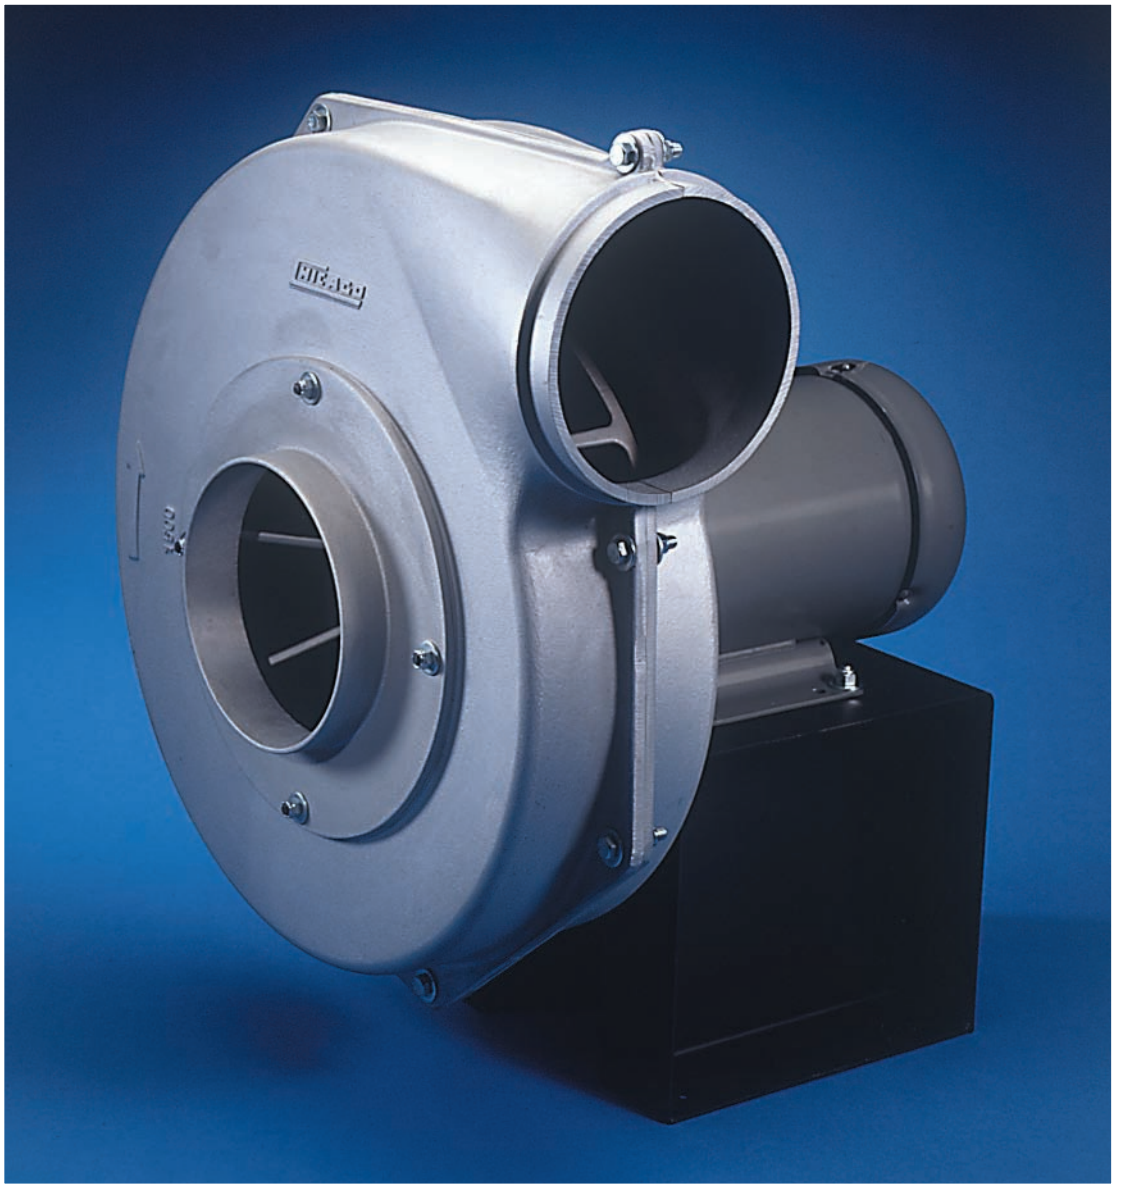
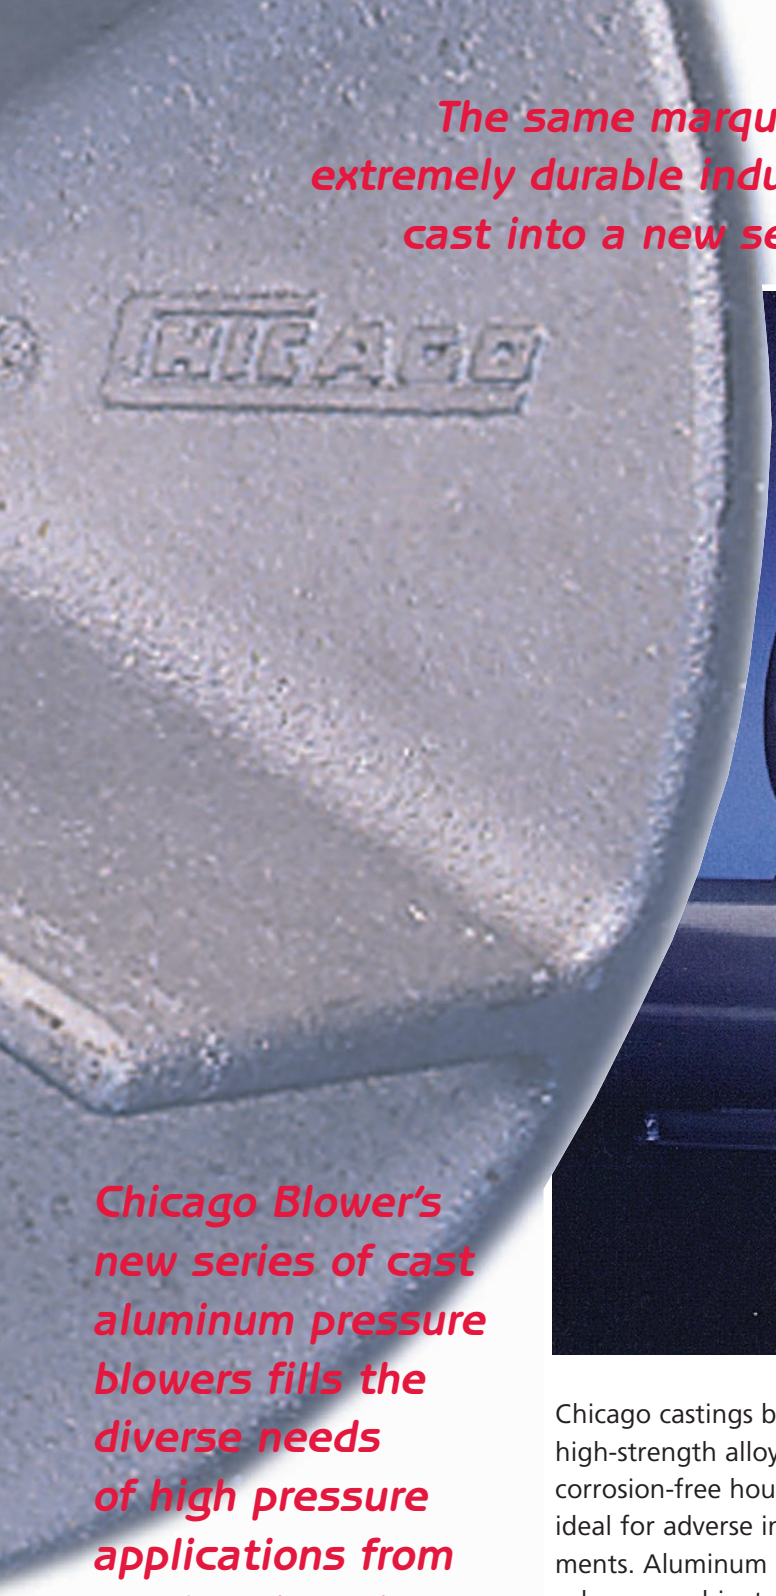
BULLETIN CAPB-101



CAST ALUMINUM PRESSURE BLOWER

CHICAGO

CHICAGO BLOWER CORPORATION



The same marque that has identified higher quality, extremely durable industrial fans for over 50 years is now cast into a new series of aluminum pressure blowers.

Chicago Blower's new series of cast aluminum pressure blowers fills the diverse needs of high pressure applications from combustion air to fume and dust control to food processing.

Chicago castings blend aluminum with high-strength alloys to create strong, corrosion-free housings and wheels ideal for adverse industrial environments. Aluminum also stands up to sub-zero ambients without material deterioration. Since aluminum is non-magnetic and non-toxic, Chicago's pressure blowers are recommended for both electronic and food related applications. The non-sparking properties qualify Chicago's pressure blowers for AMCA Type B spark resistant rating.

"Industrial Quality" has long described Chicago's rugged construction and guarantees exceptional performance and reliability. Our fan's most important feature is the reliability we are able to add to your product. If you are unsure of a fan selection for a specific application, your Chicago representative will help provide recommendations. Chicago Blower offices are located throughout North America and around the world.

CHICAGO

Blower size 1000 is available with five wheels of differing widths and diameters.

Each of the eight pressure blower housings can be fitted with multiple wheel/inlet configurations to match the volume required for the application. Depending on any one size there is up to 24 combinations available.

With all these possible selections, the user gains the efficiency and maintenance-free advantages of direct drive with the performance versatility of belt drive. Even if performance needs should change in the future, an alternate wheel can be easily fitted to meet the new requirement. No wasted motion. The housing and motor will usually remain unchanged.

Chicago's Design 38 cast aluminum pressure blowers are offered in eight sizes from 8" to 18-1/2" in combination with 64 unique wheels, all stocked for quick assembly. They produce flows to 5000 CFM and static pressures to 20" wg. and have been performance verified in an AMCA certified lab.

Chicago's Wheel Designs Meet Your Precise Performance Requirement with Direct Drive Reliability

Six-bladed radial wheel

Eight-bladed radial wheel

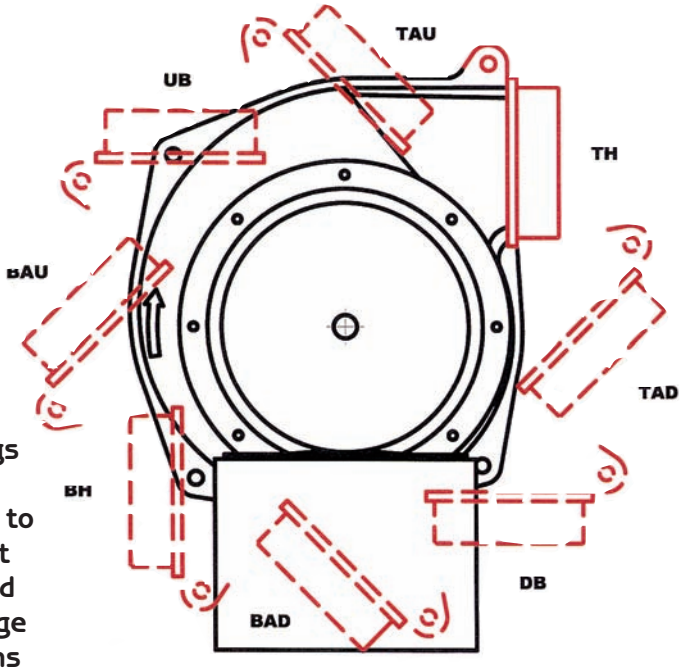
Back-ward curved wheel

WHEELS

Chicago offers two basic types of cast aluminum wheels. Radial blades are the most commonly used and provide the best overall performance. They consist of either six or eight blades depending on wheel diameter. Backward curved blades have inherently different performance characteristics, are somewhat quieter, but are not self-cleaning.

Wheels with tip speeds to 13,000 fpm are cast of 319 aluminum while higher speed wheels are 356 aluminum and heat treated. All wheels utilize an integral straight bore hub and are statically and dynamically balanced.

Quality Features from the Quality Company

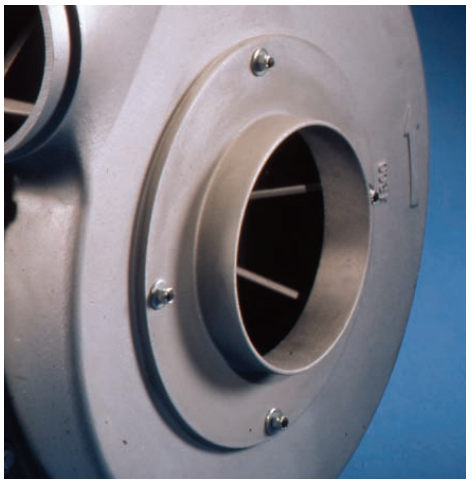


Housings can be rotated to all eight standard discharge positions

HOUSINGS

Chicago's Design 38 pressure blowers have housings cast of 319 aluminum. Their unique split housing design with both inlet and drive side cover plates provide more installation and application versatility.

With bolted cover plates, the blower's flow is *reversable* for either clockwise or counterclockwise rotation. In addition, the housings are *rotatable* to eight standard discharge positions. Bolted construction facilitates field changeover and also simplifies periodic cleanout.



SHAFT SEAL

A virgin teflon sheet is bolted to the drive side of the housing. The seal is designed to reduce airstream leakage and contamination through the blower shaft opening in the housing.

RUGGED MOTOR BASE

A heavy gauge steel pedestal holds the motor firmly in place. The flanged and welded construction provides exceptional rigidly.

Motors from recognized manufacturers are factory mounted and tested at running speed for vibration and balance.

INLETS/OUTLETS

The basic slip fit inlet is standard on Chicago's pressure blowers and is cast into the inlet coverplate. Diameters are available from 4" to 10" for convenient fit of ductwork. The variety of inlet sizes helps fine tune performance for direct drive blowers.

The outlet is cast into each housing half in 4" to 8" diameters for a slip fit duct connection.

BLOWER ARRANGEMENTS

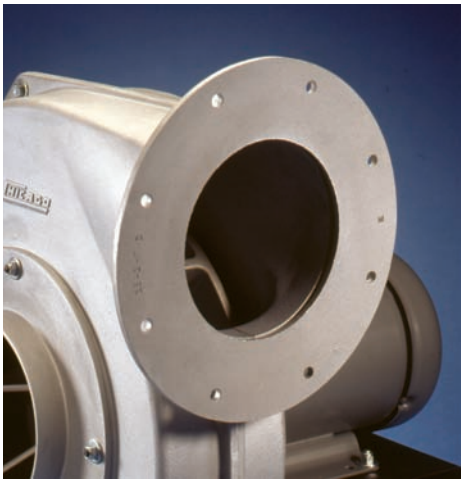
DIRECT DRIVE

- Arrangement 4, with c-face flange and/or foot mounted motor.
- Arrangement 4V, vertical mount with c-face flange mounted motor. Includes flanged inlet.

BELT DRIVE

- Arrangement 1 includes heavy steel bearing pedestal.
- Arrangement 9 as above except includes motor slide base. Motor and drives are factory mounted.

OPTIONAL ACCESSORIES



FLANGED INLETS/OUTLETS

Cast aluminum flanges mount to either inlet or outlet. Inlet flange holes are on centerline. Outlet flange holes straddle centerline.

HOUSING DRAIN

To facilitate cleanout, a 1/2" drain with plug is located in the lowest point of the housing.

VIBRATION ISOLATORS

Rubber-In-Shear (RIS) isolators with steel mounting plate molded in are available for vibration sensitive installations. They provide 1/4" static deflection.

SLIDE GATE DAMPERS

Dampers allow manual adjust of air volume to suit the application. Housings are cast aluminum with a galvanized steel gate and screwlock to hold gate firmly in place. Dampers are available for inlet or outlet in either full cutoff style mounted on the housing, or half cutoff style that mounts to ductwork.

INLET/OUTLET SCREENS

Spiral welded steel screen with zinc, clear chromate finish mounts over the standard slip fit inlet or outlet. Screens are strongly recommended for installations with unducted inlets or outlets.

INLET FILTER

Efficient inlet filters are available as either a disposable paper type or as a cleanable, reusable wire mesh. The cannister has a flanged base for mounting to a flanged inlet.

Half cut-off slide gate damper on a Series 1400 blower with bottom angular up discharge. Ductwork not shown.

PRESSURE BLOWER SELECTION

Blower capacity tables are based on standard air at 70°F and sea level. For other operating conditions, correct the required Static Pressure (SP) before using the rating tables. The Brake Horsepower (BHP) is corrected after blower selection has been made.

EXAMPLE:

Select a pressure blower to handle 1000 CFM at 2.75" SP, 100°F and at 1000 feet above sea level.

Refer to the Temperature/Altitude table. At 1000 feet and 100°F, the correction factor is 1.10.

Corrected SP is 1.10 X 2.75" SP = 3.025" SP at 70°F and sea level. To simplify, use 3.00"SP.

FOR DIRECT DRIVE

Using the Direct Drive Performance tables, enter the tables at the required Static Pressure, 3.00" SP. Reading down the column, find the CFM rating(s) that meet the required 1000 CFM. Several blowers meet this requirement, one of which is a Model 1400 with a 12-1/4" x 2-7/8" wheel and 6" inlet. The blower will run at 3450 RPM and require 2.46 BHP at 70°F and sea level.

Correct the BHP. Divide 2.46 by the correction factor (1.10). 2.46 ÷ 1.10 = 2.24 BHP at 100°F and 1000' altitude.

FOR BELT DRIVE

Using the Belt Drive Performance tables, one selection for 1000 CFM at 3" SP would also be a Model 1400. The blower will run at 2470 RPM and require 1.45 BHP at 70°F and sea level. (Actual RPM and BHP was calculated by interpolating between the 1050 and 900 CFM in the tables.)

Correct the BHP. Divide 1.45 by the correction factor (1.10). 1.45 ÷ 1.10 = 1.32 BHP at 100°F and 1000' altitude.

NOTE:

When several ratings meet the requirements, usually the lowest brake horsepower requirement will provide the most efficient and quietest selection.

Temperature and Altitude Correction

AIR TEMP (F°)	ALTITUDE (feet) with BAROMETRIC PRESSURE (HG)							
	0´ 29.92	500´ 29.38	1000´ 28.86	1500´ 28.33	2000´ 27.82	2500´ 27.31	3000´ 26.82	3500´ 26.32
-15	.79	.81	.82	.84	.85	.87	.88	.90
0	.87	.88	.90	.92	.93	.95	.97	.99

100	1.06	1.08	1.10	1.12	1.14	1.16	1.18	1.20
150	1.15	1.17	1.19	1.22	1.24	1.26	1.28	1.31
200	1.25	1.27	1.29	1.32	1.34	1.36	1.39	1.42

Correction factors for temperature (F) and altitude (above sea level); standard air = .075 lbs.per cubic foot at sea level, 29.92" barometric pressure and 70° F

Identical performances can be achieved by different blower sizes by varying the wheel widths and diameters. Often installation requirements will determine the blower size.

Refer to Chicago Blower's Selection program, fan.net, for performance, fan curves and sound data. Contact your local Chicago Blower sales engineer for software and assistance.

ENGINEERING SPECIFICATIONS

Centrifugal CPB Fans

GENERAL:

Provide a high performance, low maintenance, centrifugal fan with radial wheel. Fan shall be air performance tested based on tests and procedures in accordance with AMCA 211. Fans must be manufactured and assembled in the U.S.A.
Acceptable vendors: Chicago Blower Corporation

PERFORMANCE:

Performance shall include steep pressure and overloading horsepower characteristics. Mechanical efficiency shall be no less than 60%. System static pressure changes of 30% shall result in no more than 10% CFM reduction.

HOUSING:

Housing shall be cast with 319 cast aluminum, having a 3/16" minimum wall thickness. Housing should consist of two halves which are bolted and sealed. Inlets and outlets shall be round of nominal diameters for slip fit of ductwork, flexible connector, or hose. Housings include a Teflon shaft seal. **All housing sizes shall be reversible for clockwise or counterclockwise and capable of being rotated to all eight standard discharge positions.**

WHEEL:

Wheels with tip speeds to 13,000 feet per minute shall be 319 cast aluminum. Wheels with tip speeds over 13,000 feet per minute shall be 356 cast aluminum with T6 heat treatment. All wheels shall have an integral straight bore hub keyed with set screws for mounting. Wheels to be statically and dynamically balanced to G 6.3 standards in accordance with ISO 1940 and ANSI S2.19 specifications. The addition of weights is not allowed, thus balancing shall be accomplished by material removal only.

MOUNTING:

Motorbase-Fan shall be mounted with heavy gauge steel pedestal.

FACTORY MOUNTED MOTORS:

Motors to be factory mounted. Unit to be tested at running speed for vibration and balance. Filtered vibration readings, taken at bearings, not to exceed .22 inches per second.

ACCESSORIES:

- Flanged Inlet/Outlet – 319 Cast Aluminum with Punched Holes
- 1/2" NPT Housing Drain with Plug
- Inlet/Outlet Screen
- RIS Isolators
- Inlet Filter
- Slide Gate Damper
- Belt Guard
- Shaft and Bearing Guard

Setting the Standard For Quality

CHICAGO

Innovative Engineering Through Application Analysis

Quality Fans Shaped With Skill and Pride

Global Service Only a Click Away

Sales Offices Throughout North America

Chicago Blower Fans are also manufactured worldwide:

Argentina, Australia, Brazil, Chile, China, Colombia, Denmark, Germany, Greece, Holland, Hong Kong, India, Indonesia, Israel, Italy, Japan, Korea, Malaysia, New Zealand, Norway, Philippines, Portugal, Saudi Arabia, Singapore, South Africa, Spain, Sweden, Thailand, Taiwan, Turkey, Venezuela.

Your Primary Source For Every Fan Requirement

General Duty -

Airfoil and vane axial fans for clean exhaust or supply air

Industrial Duty -

Fans to handle dirty and corrosive environments

Heavy Duty -

Custom engineered fans for specific applications
