AIRFOIL PLENUM FANS

Chicago Blower certifies that the Design 51 Plenum Fan shown herein is licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

PLENUM FANS

FOR AIR HANDLING AND CONDITIONING

Chicago's Plenum Fan offers a practical, economical design alternative for air handling and conditioning systems. It features an unshoused true airfoil bladed wheel that installs directly within the plenum, thereby eliminating the downstream discharge. The fan can be installed either horizontally or vertically.

Without the conventional scroll, the Plenum Fan provides the required performance in less space. It is therefore ideal for retrofit applications where system performance needs to be expanded and more space is not available. For either supply fan, return fan or exhaust fan applications, rely on the performance and durability of Chicago Airfoil Plenum Fans.

MORE MODELS FOR ADDED VERSATILITY

Plenum Fans are specified for use in

both field build-up units and factory built air handling units. Chicago catalogs the widest range of plenum fans in the industry. Standard is the single width Arrangement 3 fan in either rotation in sizes from 135 to 807 and capacities to 158,000 CFM. Arrangement 4 Direct Drive Plenum Fans are also available. Fans are offered in Class I, Class II and Class III construction. Ask for Chicago's Airfoil Plenum Fan computer selection program with sound

For application assistance contact one of the Chicago Sales Engineers located throughout the United States and around the world.

data, static pressure and brake hp curves.

CHICAGO BUILT - QUALITY BUILT

Consistent quality assurance is integral to each Chicago fan building operation, from incoming raw material inspection to affixing the "Proudly Made in the USA" union label. Chicago's long-standing industrial level quality and reliability is apparent in every Chicago manufactured product.

System performance and dependability relies heavily upon Chicago's airfoil wheel.

CHICAGO AIRFOIL WHEEL

Widely recognized for design proficiency and integrity, Chicago's airfoil wheel has a broad high-efficiency curve that offers a wide operating range and also offers more extensive selections from each fan size.

Precision balancing assures quiet vibration-free operation and adds to the overall reliability of Chicago airfoil fans.

HYPERBOLIC SPUN STEEL WHEEL CONE

The hyperbolic spun steel wheel cone optimizes the smooth stable air flow across the entire operating range.

TRUE AIRFOIL BLADES

Every Chicago wheel size is fitted with true hollow airfoil blades with weep holes to prevent moisture build-up inside the blade. The availability of three blade construction classes assures a fan selection to meet specific application duty requirements.

With Class I construction, continuous welding is standard.

Class II construction features a continuous weld specification for all sizes and reinforced ribs on all sizes over 445.

On Class III all blades have reinforced ribs.

Recommended maximum pressure is 12" SP with temperatures to 140°F.

RUGGED FRAME

Chicago plenum wheel assemblies are enclosed in a rugged industrial strength frame. Heavy gauge steel panel, angle and supports are continuously welded. This extremely stiff bracing resists any possible distortion caused by sudden air flow variations.

PRECISION SHAFTS

Precision shafts are turned, ground and polished SAE 1040-1045 steel. Heavy-duty bearings are computer selected for a minimum bearing life L-10 of over 40,000 hours, average life L-50 of over 200,000 hours.

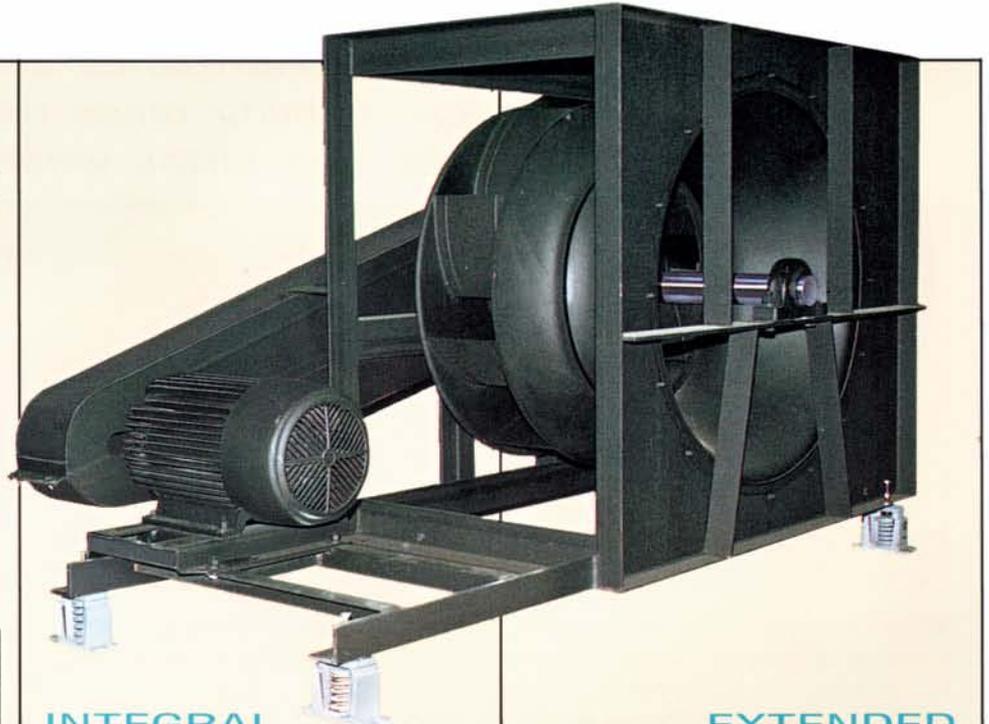

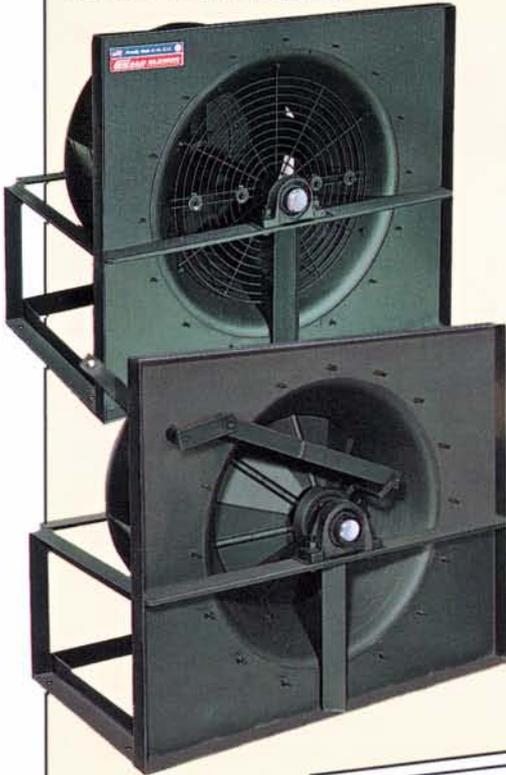

LOW VIBRATION MODEL

Developed initially to meet the needs of the semi-conductor industry, the low-vibration Plenum Fan is now specified for many applications. Rotors are precision balanced to levels below normal ISO/ANSI requirements.

INLET SCREEN

The strong welded steel wire screen mounts within the inlet cone. When furnished with an Inlet Volume Control, the screen is mounted outside the inlet vanes.

INTEGRAL VIBRATION BASE

A base of structural channel is mounted on anti-vibration springs to isolate all rotating components.

EXTENDED GREASE FITTINGS

Fittings are mounted on the outside for easy accessibility.

BELT GUARD

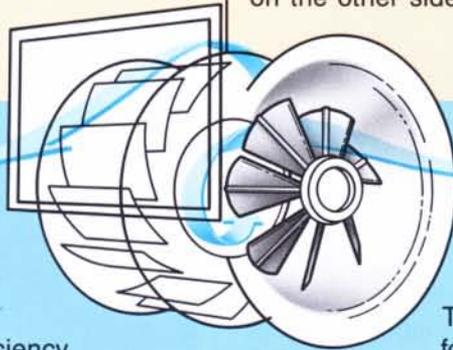

The guard has solid metal on three sides with expanded metal on the other side for ventilation and inspection.

SPECIAL COATINGS

Numerous paint and corrosion-resistant finishes are available to meet specific applications.

INLET VOLUME CONTROL

For maximum efficiency, economical performance and precise air control at partial loads, Chicago's IVC is strongly recommended. Adjustable guide vanes pre-spin the entering air in the same rotation as the wheel to produce the desired volume of air at the exact pressure. Inlet vanes are nested entirely within the cone, mounted from the wheel

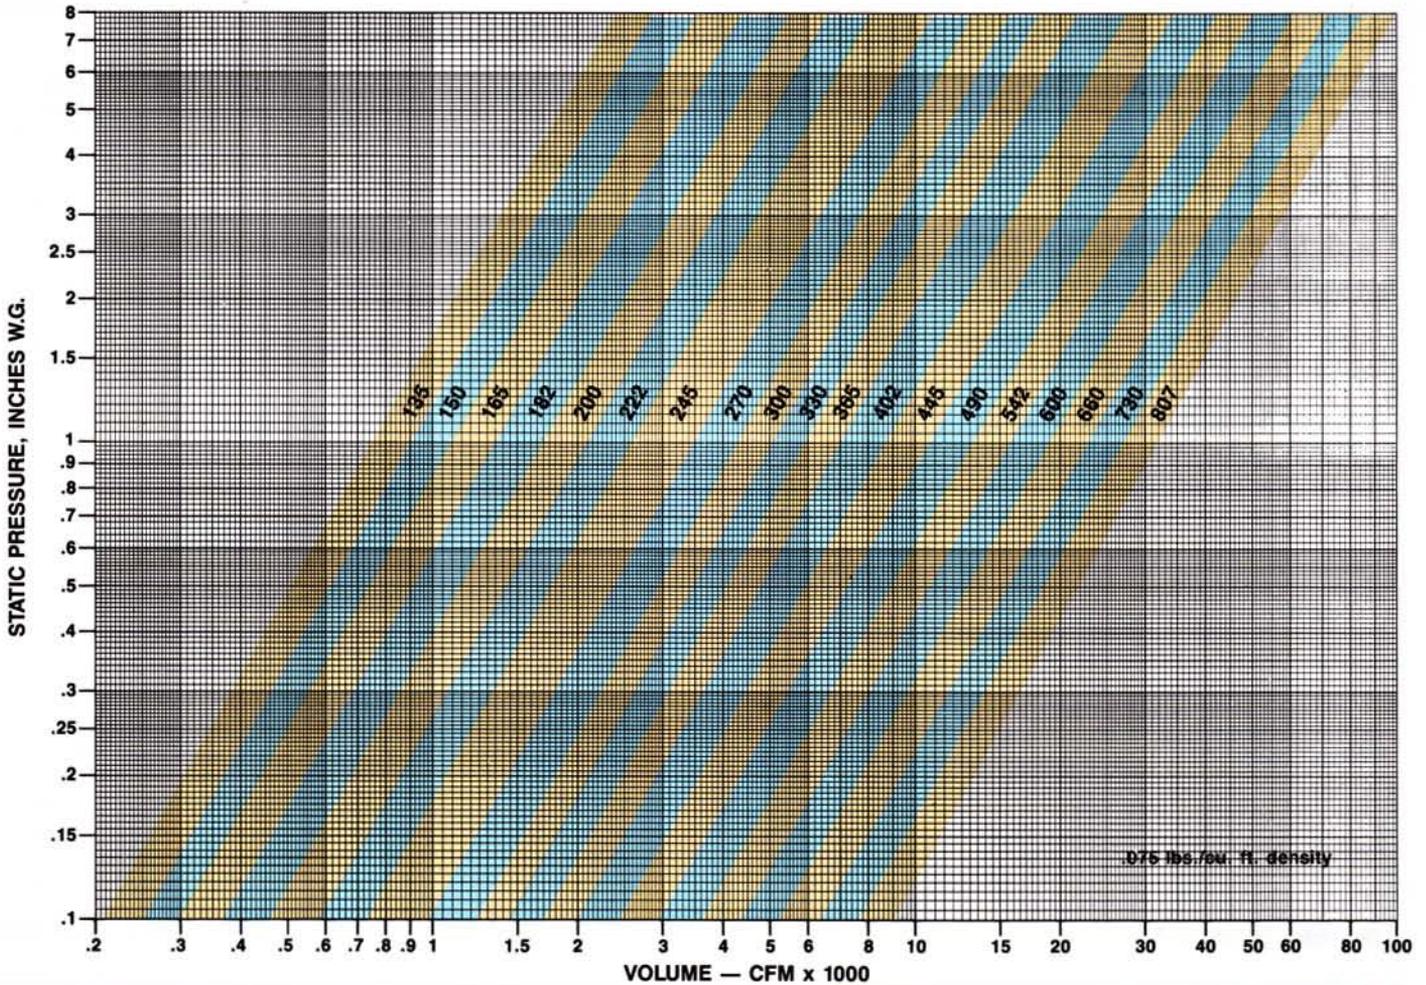

side for easier accessibility. The IVC is suitable for automatic or manual operation.

SAFETY WHEEL GUARD

A strong expanded metal "cage" surrounds the fan and affords maximum protection.

FOR THE MOST EFFICIENT FAN

Energy consumption is a major consideration in every engineer's equipment selection procedure. This Chicago Quick Selection Method selects the most energy efficient fan size for any required duty.

To determine the most efficient fan size, locate the intersection of the required volume (CFM) and static pressure (SP) on the graph above. The area containing the intersection is labeled with the most efficient fan size.

EXAMPLE:

Select a fan for 8,000 CFM at 2" SP. The intersection of 8,000 CFM and 2" SP shows a Size 330 as the most efficient fan.

Having selected the most efficient fan, refer to the multi-rating table for that fan and find the speed and horsepower required to deliver the CFM and SP specified.

For computer selections, curves and sound data, request Chicago software programs from your local Chicago Blower Sales Engineer.

NOTE:

A fan one size smaller than the most efficient should also be considered because it may require only slightly higher horsepower at a lower initial cost.

Pages 7 thru 25 contain multi-rating tables for every size fan. Each page provides data for one size ranging from 1/4" static pressure SP up to 8" SP. Volume is listed in cubic feet per minute, (CFM). Under each SP rating is the speed, (RPM) and Power, (BHP) required for each corresponding CFM rating. Simply interpolate between ratings for any value not listed.

Classes I and II are indicated by different color tints. Refer to the factory for Class III performance.

EXAMPLE 1.

Below is a section of Page 7 showing the performance of a size 135. For a desired duty of 2600 CFM (A) at 3 SP (B) the fan will need to run at 3152 RPM (C) and use 2.39 BHP (D).

EXAMPLE 2.

When a desired duty falls between published ratings exact speed and horsepower can be interpolated. 1350 CFM at 1" can be determined by using available Table Data (E). RPM is 1723 and BHP is .40.

The inlet cones, wheel cones, blades and housing of the Design 51 are designed to provide an extremely smooth flow of air into and through the fan. The primary advantages of this design are high efficiency and low sound levels.

The table below lists estimated sound levels (dBA) for each fan size at various speeds within the fan's normal operating range. To determine the estimated dBA for a selected fan, locate the intersection of the fan size and the fan RPM. Use the RPM closest to the actual RPM.

EXAMPLE 1.

The estimated dBA of a Size 365 fan operating at 1000 RPM is 69 dBA.

EXAMPLE 2.

The estimated dBA of a Size 402 fan operating at 1100 RPM can be calculated as 75 dBA (interpolate between 72 dBA at 1000 RPM and 77 dBA at 1200 RPM).

FAN SIZE	FAN SPEED RPM

NOTES:

1. Sound levels are based on tests conducted in accordance with AMCA Standard 300, Set Up No. 1.
2. Sound level computations are based on a distance of 10 feet from the open inlet of the fan in a free field environment.
3. Specific octave band sound power levels and sound pressure levels are available on request.
4. Sound levels of installed fans can vary greatly from laboratory tests. The dBA ratings above are only to be used as estimates. Any comparisons and all detailed calculations should be based upon sound power levels, which are independent of the installation.
5. The AMCA Certified Ratings Seal applies to air performance only.

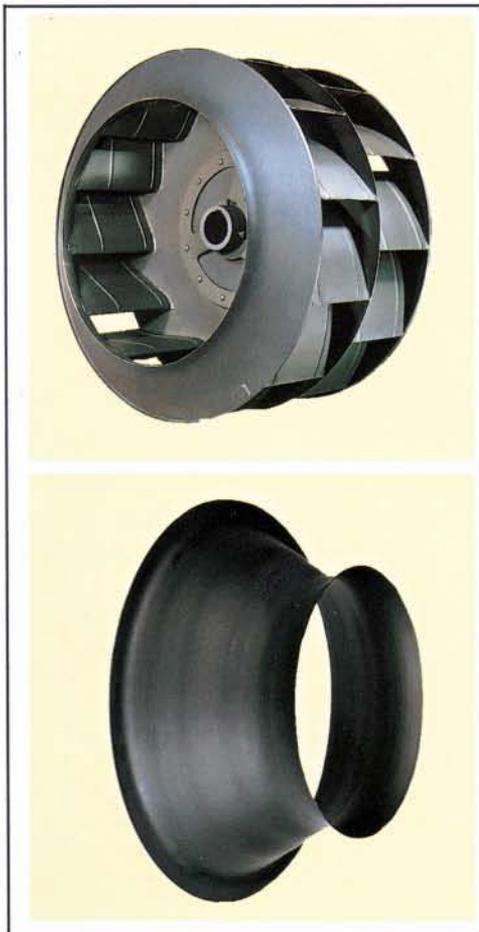

COMPLETE FANS

Chicago's Design 51 Airfoil fans are available in both single width and double width configurations. They are ideal for high volume heating, ventilating and air conditioning plus most industrial supply and exhaust systems.

Chicago catalogs a wider range of airfoil wheel sizes from 8-3/4 to 80-3/4 to supply volumes from 225 to 340,000 CFM at pressures from 1/2" to 15-1/2" wg.

Many performance and convenience options extend the flexibility of the standard Design 51 fan; inlet screens, outlet dampers, unitary and integral bases and special finishes for example. Chicago's own Inlet Volume Control provides precise air control at partial loads for more economical operation.

COMPONENTS

Many system builders and OEMs specify Chicago Airfoil components for their packaged equipment applications. Components offered include single and double width airfoil wheels and housings, inlet cones in either 100% or 72% widths and Inlet Volume Controls for variable volume systems.

In addition, special finishes and alternate materials are available to suit specific application or installation requirements.
